

BlackDiamond 12804C

BlackDiamond® 12804C—Taking application performance to the next level.

Designed to Enforce Application Performance

- Quality of Service (QoS) and performance providing application scalability
- System scalability for multicast applications
- Scalable management through extensibility

Voice-Class Availability

- Redundant hardware design
- ExtremeXOS® modular operating system
- High availability network using Ethernet Automatic Protection Switching (EAPS)

Resiliency Under Attack

- Threat detection and response with CLEAR-Flow Security Rules Engine
- Layer 3 Virtual Switching to separate customer domains
- Hardened network infrastructure

BlackDiamond 12804C delivers the capability to enforce application performance security that scales to 10 gigabit rates, and voice-class availability.

As today's enterprise networks continue to converge, there is an increasing need for application-level awareness within the core and aggregation layers of the network. As the leader in open networks, Extreme Networks® provides a new level of intelligence for Ethernet networking with the BlackDiamond 12804C switch.

BlackDiamond 12804C delivers deterministic performance independent of what features are enabled and is capable of maintaining this performance under various failure conditions and/or under network attacks.

BlackDiamond 12804C, like BlackDiamond 10808, incorporates programmable ASIC technology. This programmability helps ensure that the platform will support emerging protocols without costly hardware upgrades—thus offering great investment protection.

BlackDiamond 12804C is ideal for core or aggregation applications requiring high performance, scalability and a high level of resiliency. Even more importantly, BlackDiamond 12804C is designed to help meet tomorrow's needs as well as today's. Extensibility is the key to building intelligent core networks that can adapt and respond to changing requirements over time; this is where BlackDiamond 12804C truly stands alone.

Target Applications

BlackDiamond 12804C has been designed to excel in a wide array of applications, including:

- Core applications for small and medium enterprises
- Traditional gigabit or 10 Gigabit Ethernet aggregation switch for secure environments

Designed to Enforce Application Performance

BlackDiamond 12804C provides deterministic performance independent of which features are enabled.

Application Scalability

QoS Performance

BlackDiamond 12804C delivers deep packet buffers throughout the architecture, helping ensure that even in times of congestion, packets can be queued and reliably delivered (rather than being discarded). While this adds latency under such times of stress, less advanced switches will instead discard the excess traffic. By buffering the traffic, servers do not need to timeout and retransmit traffic—greatly increasing the efficiency of both the network and the compute engines.

Low Latency

When selecting a networking switch for converged applications, selecting low latency alternatives for the networking component provides added margin for latency introduced by other elements. With the low switching latency of 9 microseconds for 64-byte packets, BlackDiamond 12804C is ideal for high-performance applications.

Jumbo Frame Support

Jumbo frames of up to 9,216 bytes in length are supported by BlackDiamond 12804C. Jumbo frames are particularly important in high performance cluster computing applications, where studies have shown their use can reduce server CPU loads by as much as 50%. Jumbo frames also reduce protocol overhead and ensure higher overall network throughput—since protocol headers are fixed size, larger frames have a higher ratio of packet payload to packet header.

Multicast

BlackDiamond 12804C builds on Extreme Networks leadership position in IP multicast, supporting hardware identification and replication of multicast traffic. Extreme Networks unique switch fabric architecture need not store and forward multiple copies of the same packet across the fabric. This provides excellent multicast performance without impacting other traffic running through the switch.

Multicast features include Internet Group Management Protocol (IGMPv2 & v3) and Protocol Independent Multicast (PIM). Both Sparse Mode and Dense Mode PIM are supported.

Scalable Management Through Extensibility

Ease of Management

Extreme Networks has developed tools that save you time and resources in managing your network. EPICenter® provides fault, configuration, accounting, performance, and security functions to manage Extreme Networks multi-layer switching equipment in a converged network.

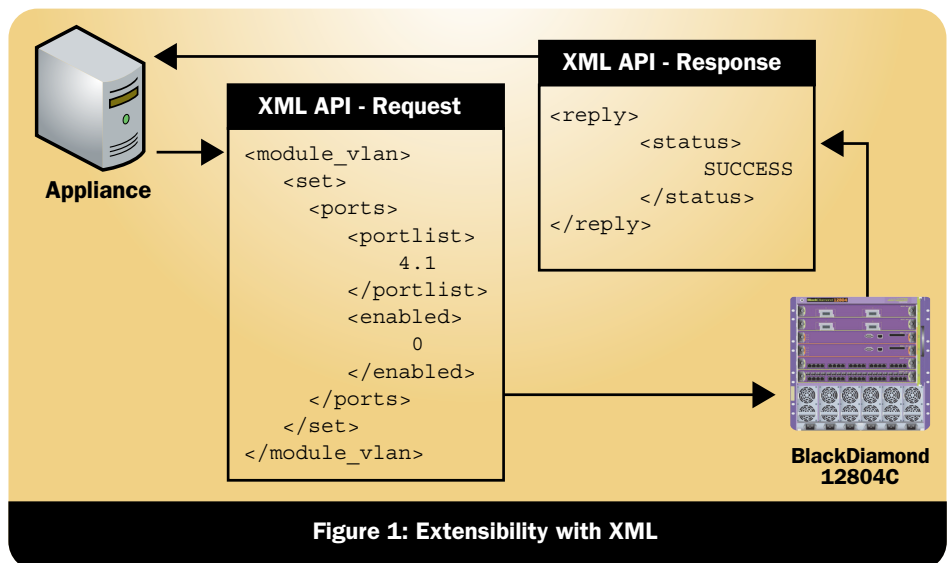

Extensibility to Integrate New Applications

ExtremeXOS allows for flexible expansion of network capabilities by providing a mechanism for third-party applications in the network to interact directly with the operating system. ExtremeXOS uses a secure XML-based API to integrate with best-of-breed monitoring and security devices. This extensibility allows integration with third-party applications to provide a closed loop for new monitoring and response capabilities (see Figure 1).

Converged Network Analyzer

Switches from Extreme Networks provide high quality QoS on the LAN. Converged Network Analyzer (CNA) from Avaya® provides the ability to enhance Extreme Networks LAN advantages with the ability to optimize QoS on the WAN. CNA coupled with Extreme Networks infrastructure and QoS on the LAN provides an optimized end-to-end IP network for Voice-over-IP (VoIP) and other business-critical applications.

Extreme Networks has embedded Avaya's CNA monitoring software in its ExtremeXOS based switches. CNA makes networks more reliable by addressing issues with inconsistent application performance over IP WAN networks. CNA software monitors the IP network for problems that affect the user experience and other applications. The optional Adaptive Path Controller module uses these assessment results to actively avoid problems in the network by selecting a better-performing alternative path whenever one is available. The result is consistent QoS across the network.

Voice-Class Availability

A high-performance network connection, whether used to connect PCs and IP telephones at the access layer or to interconnect servers in a cluster, is only useful if it is also highly available. BlackDiamond 12804C utilizes ExtremeXOS, the industry-leading modular operating system from Extreme Networks, that raises the availability of the switch. Network-level resiliency protocols are added to increase the availability of the network.

Redundant Hardware Design

Fully Redundant Management Modules (1:1)

BlackDiamond 12804C is configured so that if one Management Switch Module (MSM) fails, the second MSM will automatically take over management and switching responsibility for the entire switch. This feature is critical for networks running voice and other mission-critical applications.

Advanced Chassis Design for Availability

BlackDiamond 12804C includes a passive backplane complemented by high availability design elements such as isolated control and data planes, redundant controller boards for power distribution and fan control, and environmental monitoring to identify anomalies before they affect network availability.

Redundant Load Sharing Power Supplies

BlackDiamond 12804C supports a set of redundant power configurations that can load share up to six internal power supplies simultaneously. These power supplies can be configured in an N + 1 configuration for power supply redundancy or in an N + N configuration to provide input power redundancy for a fully loaded chassis.

Modular Operating System for Non-stop Operations

True Preemptive Multitasking and Protected Memory

ExtremeXOS allows each of the many tasks—such as Open Shortest Path First (OSPF) and Spanning Tree—to run as separate operating system tasks that are protected from each other as shown in Figure 2.

Process Monitoring and Restart

ExtremeXOS dramatically increases network availability by monitoring the independent operating system processes in real time. If any of them become unresponsive, or stop running, they are automatically restarted.

Loadable Software Modules

The modular design of ExtremeXOS allows the extension of switch functionality. New functionality can easily be added to the switch.

High Availability Network Protocols

Ethernet Automatic Protection Switching

EAPS allows the IP network to provide the level of resiliency and uptime that users expect from their traditional voice networks. EAPS is superior to the Spanning Tree or Rapid Spanning Tree Protocols, offering sub-second (less than 50 milliseconds) recovery. In most situations, VoIP calls don't drop and digital video feeds don't freeze or pixelize because EAPS enables the network to recover almost transparently from link failure.

Spanning Tree/Rapid Spanning Tree Protocols

BlackDiamond 12804C supports Spanning Tree, VLAN Spanning Tree (802.1D), and Rapid Spanning Tree (802.1w) protocols for Layer 2 resiliency.

Software Enhanced Availability

Software enhanced availability allows users to remain connected to the network even if part of the network infrastructure is down. ExtremeXOS constantly checks for problems in the network connections using advanced Layer 3 protocols such as OSPF (with graceful restart), VRRP and ESRP (ESRP supported in Layer 2 or Layer 3), and dynamically routes around the problem.

Equal Cost Multipath

Equal Cost Multipath enables links to be load balanced for performance and cost savings while also supporting redundant failover. If a link fails, traffic is automatically routed to the remaining links and connectivity is maintained.

Link Aggregation (802.3ad)

Cross module link aggregation enables trunking of up to eight links on a single logical connection, for up to 80 Gbps of redundant bandwidth per logical connection.

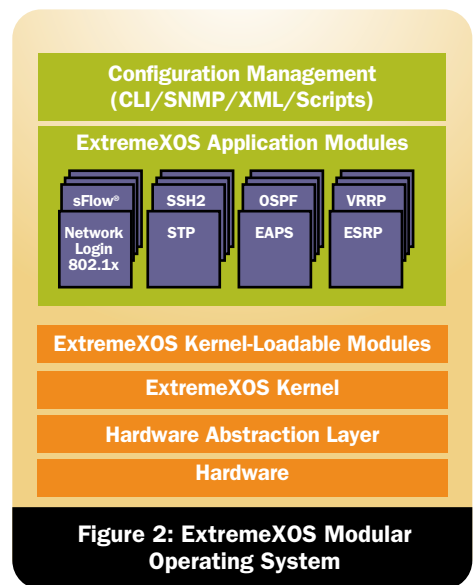

Figure 2: ExtremeXOS Modular Operating System

Security

BlackDiamond 12804C delivers a new level of security to Ethernet core networking. BlackDiamond 12804C complements the perimeter firewalls by protecting the “soft interior” of the network that currently goes unprotected. Utilizing the industry’s most advanced CLEAR-Flow Security Rules Engine, BlackDiamond 12804C can be programmed to automatically detect and mitigate security threats in seconds.

Threat Detection and Response

CLEAR-Flow Security Rules Engine

CLEAR-Flow Security Rules Engine provides first order threat detection and mitigation and mirrors traffic to security resources for further analysis of suspicious traffic in the network. Security resources are virtually available across the entire multi-gigabit network thus enabling cost-effective scalability of the security solution.

Port Mirroring

BlackDiamond 12804C supports many-to-one and cross-module port mirroring. This can be used to mirror traffic to an external network appliance such as an intrusion detection device for trend analysis or be utilized by a network administrator as a diagnostic tool when fending off a network attack.

Line-Rate Access Control Lists

ACLs are one of the most powerful tools to control network resource utilization and to secure and protect the network. BlackDiamond 12804C supports thousands of ACLs based on Layer 2, 3 or 4-header information such as the MAC address or IP source/destination address.

Layer 3 Virtual Switching

With Layer 3 Virtual Switching, BlackDiamond 12804C brings the concept of virtualization to multi-layer switching. Layer 3 Virtual Switching allows partitioning of a single switch into many virtual routers. A Layer 3 virtual switch has the same capabilities and properties as a physical router does. It inherits all the same routing mechanisms for configuration, operation and troubleshooting. As a result, each virtual switch domain can be separately managed and isolated for security and safety measures (refer to Figure 3: Layer 3 Virtual Switching).

Figure 3: Layer 3 Virtual Switching

Network traffic can be secluded into separate virtual domains to minimize security threats. Separate route tables for each virtual switch enable route isolation. Layer 3 Virtual Switching also allows the operator to use overlapping IP address spaces and support multiple communities of interest to share a single physical networking infrastructure.

Hardened Network Infrastructure

Denial of Service Protection

BlackDiamond 12804C handles Denial of Service (DoS) attacks gracefully. If the switch detects an unusually large number of packets in the CPU input queue, it will assemble ACLs that automatically stop these packets from reaching the CPU. After a period of time, the ACLs are removed. If the attack continues, they are reinstalled.

ASIC-based Longest Prefix Match

Longest Prefix Match (LPM) routing eliminates the need for control plane software to learn new flows and allows the network to be resilient under a DoS attack. With LPM the CPU is not burdened with forwarding the “first packet” to any unrecognized destination, freeing the CPU for critical tasks.

Secure Management

Protocols like SSH2, SCP and SNMPv3 supported on the BlackDiamond 12804C switch prevent the interception of management communications and man-in-the-middle attacks.

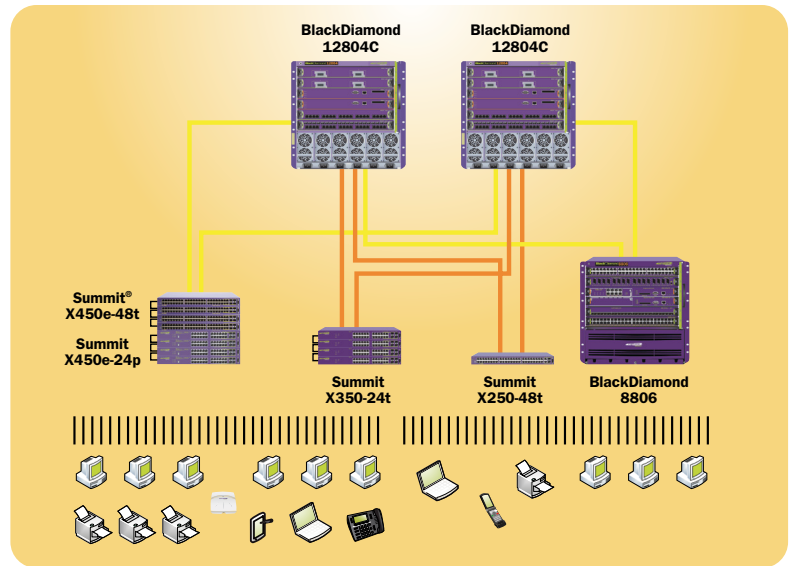

MD5 Authentication of Routing Protocols

MD5 authentication of routing protocols prevents attackers from tampering with valid messages and attacking routing sessions.

Target Applications

Enterprise Core

BlackDiamond 12804C provides the small to medium enterprise with an ideal core switch solution that satisfies their complete network needs. The CLEAR-Flow Security Rules Engine and Layer 3 Virtual Switching capability of BlackDiamond 12804C have set the bar for core security. The extensibility offered by ExtremeXOS allows the enterprise core to be tightly integrated with best-in-class security products.

Traditional Aggregation Layer

While Extreme Networks believes that a two-tier network is a simpler approach, the layout of a building or campus wiring plan sometimes requires an aggregation layer. This layer typically aggregates gigabit or 10 gigabit uplinks from edge switches and connects up to the core through gigabit and/or 10 Gigabit Ethernet uplinks. The BlackDiamond 12804C switch addresses the need for high-performance and fault-tolerant connectivity required for the aggregation layer.

Technical Specifications

ExtremeXOS 12.4 Supported Protocols

Switching

- RFC 3619 Ethernet Automatic Protection Switching (EAPS) and EAPsv2
- IEEE 802.1D – 1998 Spanning Tree Protocol (STP)
- IEEE 802.1D – 2004 Spanning Tree Protocol (STP and RSTP)
- IEEE 802.1w – 2001 Rapid Reconfiguration for STP, RSTP
- IEEE 802.1Q – 2003 (formerly IEEE 802.1s) Multiple Instances of STP, MSTP
- EMISTP, Extreme Multiple Instances of Spanning Tree Protocol
- PVST+, Per VLAN STP (802.1Q interoperable)
- Draft-ietf-bridge-rstpmb-03.txt – Definitions of Managed Objects for Bridges with Rapid Spanning Tree Protocol
- Extreme Standby Router Protocol™ (ESRP)
- IEEE 802.1Q – 1998 Virtual Bridged Local Area Networks
- IEEE 802.3ad Static load sharing configuration and LACP based dynamic configuration
- Software Redundant Ports
- IEEE 802.1AB – LLDP Link Layer Discovery Protocol
- LLDP Media Endpoint Discovery (LLDP-MED), ANSI/TIA-1057, draft 08
- Extreme Discovery Protocol (EDP)
- Extreme Loop Recovery Protocol (ELRP)
- Extreme Link State Monitoring (ELSM)
- IEEE 802.1ag L2 Ping and traceroute, Connectivity Fault Management
- ITU-T Y.1731 Frame delay measurements

Management and Traffic Analysis

- RFC 2030 SNTP, Simple Network Time Protocol v4
- RFC 854 Telnet client and server
- RFC 783 TFTP Protocol (revision 2)
- RFC 951, 1542 BootP
- RFC 2131 BOOTP/DHCP relay agent and DHCP server
- RFC 1591 DNS (client operation)
- RFC 1155 Structure of Mgmt Information (SMIv1)
- RFC 1157 SNMPv1
- RFC 1212, RFC 1213, RFC 1215 MIB-II, Ethernet-Like MIB & TRAPs
- RFC 1573 Evolution of Interface
- RFC 1650 Ethernet-Like MIB (update of RFC 1213 for SNMPv2)
- RFC 1901, 1905 – 1908 SNMP v2c, SMIv2 and Revised MIB-II
- RFC 2576 Coexistence between SNMP Version 1, Version 2 and Version 3
- RFC 2578 – 2580 SMIv2 (update to RFC 1902 – 1903)
- RFC 3410 – 3415 SNMPv3, user based security, encryption and authentication
- RFC 3826 – The Advanced Encryption Standard (AES) Cipher Algorithm in the SNMP User-based Security Model
- RFC 1757 RMON 4 groups: Stats, History, Alarms and Events
- RFC 2021 RMON2 (probe configuration)
- RFC 2613 SMON MIB
- RFC 2925 Ping/Traceroute MIB

- RFC 2668 802.3 MAU MIB
- draft-ietf-hubmib-mau-mib-v3-02.txt
- RFC 1643 Ethernet MIB
- RFC 1493 Bridge MIB
- RFC 2096 IPv4 Forwarding Table MIB
- RFC 2737 Entity MIB v2
- RFC 2233 Interface MIB
- RFC 3621 PoE-MIB (PoE switches only)
- IEEE 802.1ag MIB
- Secure Shell (SSH-2) client and server
- Secure Copy (SCP-2) client and server
- Secure FTP (SFTP) server
- sFlow version 5
- Configuration logging
- Multiple Images, Multiple Configs
- RFC 3164 BSD Syslog Protocol with Multiple Syslog Servers
 - 999 Local Messages (criticals stored across reboots)
- Extreme Networks vendor MIBs (includes FDB, PoE, CPU, Memory MIBs)
- XML APIs over Telnet/SSH and HTTP/HTTPS
- Web-based device management interface – ExtremeXOS ScreenPlay™
- IP Route Compression

Security, Switch and Network Protection

- Secure Shell (SSH-2), Secure Copy (SCP-2) and SFTP client/server with encryption/authentication (requires export controlled encryption module)
- SNMPv3 user based security, with encryption/authentication (see above)
- RFC 1492 TACACS+
- RFC 2138 RADIUS Authentication
- RFC 2139 RADIUS Accounting
- RFC 3579 RADIUS EAP support for 802.1x
- RADIUS Per-command Authentication
- Access Profiles on All Routing Protocols
- Access Policies for Telnet/SSH-2/SCP-2
- Network Login – 802.1x, Web and MAC-based mechanisms
- IEEE 802.1x – 2001 Port-Based Network Access Control for Network Login
- Multiple supplicants with multiple VLANs for Network Login (all modes)
- Fallback to local authentication database (MAC and Web-based methods)
- Guest VLAN for 802.1x
- RFC 1866 HTML – Used for Web-based Network Login and ExtremeXOS ScreenPlay
- SSL/TLS transport – used for Web-based Network Login and ExtremeXOS ScreenPlay (requires export controlled encryption module)
- MAC Security – Lockdown and Limit
- IP Security – RFC 3046 DHCP Option 82 with port and VLAN ID
- IP Security – Trusted DHCP Server
- Layer 2/3/4 Access Control Lists (ACLs)
- RFC 2267 Network Ingress Filtering
- RPF (Unicast Reverse Path Forwarding) Control via ACLs
- Wire-speed ACLs
- Rate Limiting/Shaping by ACLs
- IP Broadcast Forwarding Control
- ICMP and IP-Option Response Control
- SYN attack protection

- CPU DoS Protection with traffic rate-limiting to management CPU
- Robust against common Network Attacks:
 - CERT (<http://www.cert.org>)
 - CA-2003-04: “SQL Slammer”
 - CA-2002-36: “SSHredder”
 - CA-2002-03: SNMP vulnerabilities
 - CA-98-13: tcp-denial-of-service
 - CA-98.01: smurf
 - CA-97.28:Teardrop_Land -Teardrop and “LAND” attack
 - CA-96.26: ping
 - CA-96.21: tcp_syn_flooding
 - CA-96.01: UDP_service_denial
 - CA-95.01: IP_Spoofing_Attacks_and_Hijacked_Terminal_Connections
 - IP Options Attack
- Host Attacks
 - Teardrop, boink, opentear, jolt2, newtear, nestea, syndrop, smurf, fraggle, papasmurf, synk4, raped, winfreeze, ping -f, ping of death, pepsi5, Latierra, Winnuke, Simping, Sping, Ascend, Stream, Land, Octopus

Security, Router Protection

Requires Edge License or above

- IP Security – DHCP enforcement via Disable ARP Learning
- IP Security – Gratuitous ARP Protection
- IP Security – DHCP Secured ARP/ARP Validation
- Routing protocol MD5 authentication

Security Detection and Protection

In Core and Aggregation Products only

- CLEAR-Flow, threshold based alerts and actions

IPv4 Host Requirements

- RFC 1122 Host Requirements
- RFC 768 UDP
- RFC 791 IP
- RFC 792 ICMP
- RFC 793 TCP
- RFC 826 ARP
- RFC 894 IP over Ethernet
- RFC 1027 Proxy ARP
- RFC 2068 HTTP server
- IGMP v1/v2/v3 Snooping with Configurable Router Registration Forwarding
- IGMP Filters
- PIM Snooping
- Static IGMP Membership
- Multicast VLAN Registration (MVR)

IPv4 Router Requirements

Requires Advanced Edge License or above

- RFC 1812 Requirements for IP Version 4 Routers
- RFC 1519 CIDR
- RFC 1256 IPv4 ICMP Router Discovery (IRDP)
- Static Unicast Routes
- Static Multicast Routes
- RFC 1058 RIP v1
- RFC 2453 RIP v2
- Static ECMP
- RFC 1112 IGMP v1

Technical Specifications

IPv4 Router Requirements continued

Requires Advanced Edge License or above

- RFC 2236 IGMP v2
- RFC 3376 IGMP v3
- RFC 2933 IGMP MIB
- RFC 2096 IPv4 Forwarding Table MIB
- RFC 1724 RIPv2 MIB
- RFC 3768 VRRPv2
- RFC 2787 VRRP MIB
- RFC 2328 OSPF v2 (Edge-mode)
- OSPF ECMP
- OSPF MD5 Authentication
- RFC 1587 OSPF NSSA Option
- RFC 1765 OSPF Database Overflow
- RFC 2370 OSPF Opaque LSA Option
- RFC 3623 OSPF Graceful Restart
- RFC 1850 OSPFv2 MIB
- RFC 2362 PIM-SM (Edge-mode)
- RFC 2934 PIM MIB
- RFC 3569, draft-ietf-ssm-arch-06.txt PIM-SSM PIM Source Specific Multicast
- draft-ietf-pim-mib-v2-o1.txt
- Mtrace, a "traceroute" facility for IP Multicast: draft-ietf-idmr-traceroute-ipm-07
- Mrinfo, the multicast router information tool based on Appendix-B of draft-ietf-idmr-dvmrp-v3-11

IPv6 Host Requirements

Current support on ExtremeXOS based Summit series, BlackDiamond 8800 series, BlackDiamond 10808 series and BlackDiamond 12800 series

- RFC 5095, Internet Protocol, Version 6 (IPv6) Specification
- RFC 4861, Neighbor Discovery for IP Version 6, (IPv6)
- RFC 2463, Internet Control Message Protocol (ICMPv6) for the IPv6 Specification
- RFC 2464, Transmission of IPv6 Packets over Ethernet Networks
- RFC 2465, IPv6 MIB, General Group and Textual Conventions
- RFC 2466, MIB for ICMPv6
- RFC 2462, IPv6 Stateless Address Auto configuration – Host Requirements
- RFC 1981, Path MTU Discovery for IPv6, August 1996 – Host requirements
- RFC 3513, Internet Protocol Version 6 (IPv6) Addressing Architecture
- RFC 3587, Global Unicast Address Format
- Telnet server over IPv6 transport
- SSH-2 server over IPv6 transport
- Ping over IPv6 transport
- Traceroute over IPv6 transport

IPv6 Interworking and Migration

Current support on ExtremeXOS based Summit series, BlackDiamond 8800 series, BlackDiamond 10808 series and BlackDiamond 12800 series

- RFC 2893, Configured Tunnels
- RFC 3056, 6to4

IPv6 Router Requirements

Current support on ExtremeXOS based Summit series, BlackDiamond 8800 series, BlackDiamond 10808 series and BlackDiamond 12800 series

- RFC 2462, IPv6 Stateless Address Auto configuration – Router Requirements
- RFC 1981, Path MTU Discovery for IPv6, August 1996 – Router requirements
- RFC 2710, IPv6 Multicast Listener Discovery v1 (MLDv1) Protocol
- RFC 3810, IPv6 Multicast Listener Discovery v2 (MLDv2) Protocol
- Static Unicast routes for IPv6
- RFC 2080, RIPng
- Static ECMP

Core Protocols for Layer 2, IPv4 and IPv6

Requires Core License or above

- EAPsv2 Shared Ports – multiple interconnections between rings
- PIM-DM Draft IETF PIM Dense Mode draft-ietf-idmr-pim-dm-05.txt, draft-ietf-pim-dm-new-v2-04.txt
- RFC 3618 Multicast Source Discovery Protocol (MSDP)
- RFC 3446 Anycast RP using PIM and MSDP
- RFC 2740 OSPFv3, OSPF for IPv6 – *Current support on Summit series with Core License or above, BlackDiamond 8800 series, BlackDiamond 10808 series, and BlackDiamond 12800 series*
- RFC 1771 Border Gateway Protocol 4
- RFC 1965 Autonomous System Confederations for BGP
- RFC 2796 BGP Route Reflection (supersedes RFC 1966)
- RFC 1997 BGP Communities Attribute
- RFC 1745 BGP4/IDRP for IP-OSPF Interaction
- RFC 2385 TCP MD5 Authentication for BGPv4
- RFC 2439 BGP Route Flap Damping
- RFC 2918 Route Refresh Capability for BGP-4
- RFC 3392 Capabilities Advertisement with BGP-4

- draft-ietf-idr-restart-10.txt Graceful Restart Mechanism for BGP
- RFC 4760 Multiprotocol extensions for BGP-4
- RFC 1657 BGP-4 MIB
- Draft-ietf-idr-bgp4-mibv2-02.txt – Enhanced BGP-4 MIB
- RFC 1195 Use of OSI IS-IS for Routing in TCP/IP and Dual Environments (TCP/IP transport only)
- RFC 2763 Dynamic Hostname Exchange Mechanism for IS-IS
- RFC 2966 Domain-wide Prefix Distribution with Two-Level IS-IS
- RFC 2973 IS-IS Mesh Groups
- RFC 3373 Three-way Handshake for IS-IS Point-to-Point Adjacencies
- RFC 3784 IS-IS Externs for Traffic Engineering (wide metrics only)
- Draft-ietf-isis-restart-02 Restart Signaling for IS-IS

- Draft-ietf-isis-ipv6-06 Routing IPv6 with IS-IS – *Current support on Summit series with Core License or above, BlackDiamond 8800 series, BlackDiamond 10808 series, and BlackDiamond 12800 series*
- Draft-ietf-isis-wg-multi-topology-11 Multi Topology (MT) Routing in IS-IS

QoS and VLAN Services

Quality of Service and Policies

- IEEE 802.1D – 1998 (802.1p) Packet Priority
- RFC 2474 DiffServ Precedence, including 8 queues/port
- RFC 2598 DiffServ Expedited Forwarding (EF)
- RFC 2597 DiffServ Assured Forwarding (AF)
- RFC 2475 DiffServ Core and Edge Router Functions

VLAN Services: VLANs, vMANs

- IEEE 802.1Q VLAN Tagging
- IEEE 802.1v: VLAN classification by Protocol and Port
- Port-based VLANs
- Protocol-based VLANs
- MAC-based VLANs
- Multiple STP domains per VLAN
- Upstream Forwarding Only/Disable Flooding
- RFC 5517 Private VLANs
- VLAN Translation
- IEEE 802.1ad Provider Bridge Network, virtual MANs (vMANs)
- vMAN Ethertype Translation/Secondary vMAN Ethertype
- Multicast Support for PVLAN
- Multicast Support for VLAN Aggregation
- VLAN Aggregation (Requires Advanced Edge License or above)

Advanced VLAN Services, MAC-in-MAC

- Requires Advanced Edge License or above (*BlackDiamond 10808 and BlackDiamond 12800 series only*)
- VLAN Translation in vMAN environments
- vMAN Translation
- IEEE 802.1ah/D1.2 Provider Backbone Bridges (PBB)/MAC-in-MAC

MPLS and VPN Services

Multi-Protocol Label Switching (MPLS)

- Requires MPLS Layer 2 Feature Pack License
- RFC 2961 RSVP Refresh Overhead Reduction Extensions
- RFC 3031 Multiprotocol Label Switching Architecture
- RFC 3032 MPLS Label Stack Encoding
- RFC 3036 Label Distribution Protocol (LDP)
- RFC 3209 RSVP-TE: Extensions to RSVP for LSP Tunnels
- RFC 3630 Traffic Engineering Extensions to OSPFv2
- RFC 3811 Definitions of Textual Conventions (TCs) for Multiprotocol Label Switching (MPLS) Management
- RFC 3812 Multiprotocol Label Switching (MPLS) Traffic Engineering (TE) Management Information Base (MIB)

Technical Specifications

MPLS and VPN Services continued

Multi-Protocol Label Switching (MPLS)

Requires MPLS Layer 2 Feature Pack License

- RFC 3813 Multiprotocol Label Switching (MPLS) Label Switching Router (LSR) Management Information Base (MIB)
- RFC 3815 Definitions of Managed Objects for the Multiprotocol Label Switching (MPLS), Label Distribution Protocol (LDP)
- RFC 4090 Fast Re-route Extensions to RSVP-TE for LSP (Detour Paths)
- RFC 4379 Detecting Multi-Protocol Label Switched (MPLS) Data Plane Failures (LSP Ping)

Layer 2 VPNs

Requires MPLS Layer 2 Feature Pack License

- RFC 4447 Pseudowire Setup and Maintenance Using the Label Distribution Protocol (LDP)
- RFC 4448 Encapsulation Methods for Transport of Ethernet over MPLS Networks
- RFC 4762 Virtual Private LAN Services (VPLS) using Label Distribution Protocol (LDP) Signaling
- RFC 5085 Pseudowire Virtual Circuit Connectivity Verification (VCCV)
- draft-ietf-bfd-base-09.txt Bidirectional Forwarding Detection

- draft-ietf-l2vpn-vpls-mib-02.txt Virtual Private LAN Services (VPLS) Management Information Base

General Specifications

Switching Capacity

- 160 Gbps total switching capacity, with 9 microsecond latency for 64-byte packets

MSM and I/O Modules

- MSM-5: MSM modules contain both the control plane as well as the switch fabric for the BlackDiamond 12804
- GM-20XT: 20-port Gigabit Ethernet module. Each port can be used for 10/100/1000BASE-T or SFP connectivity (requires SFP modules)
- GM-20T: 20-port 10/100/1000BASE-T Gigabit Ethernet module (RJ-45)
- XM-2X: 2-port 10G module. XENPAK modules required

Power Supply Options

Both AC and DC power supplies are available

- AC power supplies can run from 90-264 VAC, and deliver
 - 700W at 90V to 120V, or
 - 1200W at 200V to 240V
- 48V DC power supplies deliver 1200W of power

Physical Specifications

Dimensions

- Chassis: 17.5" high x 17.51" wide x 18.23" deep (44.45 cm x 44.5 cm x 46.3 cm)
- MSM Module Dimensions: 1.63" high x 15.26" wide x 15.25" deep (4.1 cm x 38.8 cm x 38.7 cm)
- I/O Module Dimensions: 1.63" high x 15.26" wide 15.25" deep (4.1 cm x 38.8 cm x 38.7 cm)

Weight

- Empty Chassis: 65 lb (29.5 kg)
- Power Supply: 7 lb (3.2 kg)
- MSM-5: 8.5 lb (3.9 kg)
- G20XT: 8.5 lb (3.9 kg)
- G20T: 7.5 lb (3.4 kg)
- XM-2X: 7 lb (3.2 kg)

Power

- Chassis with Fan Trays: 45W, 48V, 1.0A (Heat Dissipation: 154 BTU)
- MSM-5: 185W, 48V, 3.3A (Heat Dissipation: 632 BTU)
- GM-20XT Module: 161W, 48V, 3.5A (Heat Dissipation: 549 BTU)
- GM-20T Module: 149W, 48V, 3.5A (Heat Dissipation: 509 BTU)
- XM-2X Module: 132W, 48V, 2.9A (Heat Dissipation: 450 BTU)

Operating Specifications

- Operating Temperature Range: 0° C to 40° C (32° F to 104° F)
- Operating Humidity: 10% to 95% relative humidity, non-condensing
- Transportation Temperature: -40° C to 70° C (-40° F to 158° F)
- Storage and Transportation Humidity: 10% to 95% relative humidity, non-condensing

Regulatory/Safety Standards

North American Safety of ITE

- UL 60950-1:2003 1st Ed., Listed Device (U.S.)
- CSA 22.2#60950-1-03 1st Ed.(Canada)
- Complies with FCC 21CFR Chapter1, Subchapter J (U.S. Laser Safety)
- CDRH Letter of Approval (U.S. FDA Approval)
- IEEE 802.3af 6-2003 Environment A for PoE Applications

European Safety of ITE

- EN60950-1:2001
- EN 60825-1+A2:2001 (Lasers Safety)
- TUV-R GS Mark by German Notified Body
- 73/23/EEC Low Voltage Directive

International Safety of ITE

- CB Report & Certificate per IEC 60950-1:2001+All Country Deviations
- AS/NZX 3260 (Australia/New Zealand)

EMI/EMC Standards

North America EMC for ITE

- FCC CFR 47 part 15 Class A (USA)
- ICES-003 Class A (Canada)
- European EMC standards
- EN 55022:1998 Class A
- EN 55024:1998 Class A includes IEC 61000-4-2, 3, 4, 5, 6, 8, 11
- EN 61000-3-2, 3 (Harmonics & Flicker)
- ETSI EN 300 386:2001 (EMC Telecommunications)
- 89/336/EEC EMC Directive

International EMC Certifications

- CISPR 22:1997 Class A (International Emissions)
- CISPR 24:1997 Class A (International Immunity)
- IEC/EN 61000-4-2 Electrostatic Discharge, 8kV Contact, 15kV Air, Criteria A
- IEC/EN 61000-4-3 Radiated Immunity 10V/m, Criteria A
- IEC/EN 61000-4-4 Transient Burst, 1kV, Criteria A
- IEC/EN 61000-4-5 Surge, 2kV, 4kV, Criteria A
- IEC/EN 61000-4-6 Conducted Immunity, 0.15-80MHz, 10V/m unmod. RMS, Criteria A
- IEC/EN 61000-4-11 Power Dips & Interruptions, >30%, 25 periods, Criteria C

Country Specific

- VCCI Class A (Japan Emissions)
- AS/NZS 3548 ACA (Australia Emissions)
- CNS 13438:1997 Class A (BSMI-Taiwan)
- NOM/NYCE (Mexico)
- MIC Mark, EMC Approval (Korea)

Environmental

- EN/ETSI 300 019-2-1 v2.1.2 – Class 1.2 Storage
- EN/ETSI 300 019-2-2 v2.1.2 – Class 2.3 Transportation
- EN/ETSI 300 019-2-3 v2.1.2 – Class 3.1e Operational
- EN/ETSI 300 753 (1997-10) – Acoustic Noise
- NEBS GR-63 Issue 2 – Sound Pressure
- ASTM D3580 Random Vibration Unpackaged 1.5G

Warranty

- Ltd. 1-year on Hardware
- 90-days on Software
- For warranty details, visit www.extremenetworks.com/go/warranty

Ordering Information

Part Number	Name	Description
65040	BlackDiamond 12804 6-slot Chassis	BlackDiamond 12804 6-slot Chassis (includes fan tray and blank front panels)
60020	BlackDiamond 700W/1200W PSU	BlackDiamond 700W/1200W 100-240V PSU
60021	BlackDiamond 1200W DC PSU	BlackDiamond 1200W -48V DC PSU
65010	BlackDiamond 12800 MSM-5	BlackDiamond 12800 Management Switch Module
66010	BlackDiamond 12800 GM-20XT	BlackDiamond 12800 20-port 1000BASE-X SFP / 1000T RJ-45 Module
66030	BlackDiamond 12800 GM-20T	BlackDiamond 12800 20-port 10/100/1000BASE-T (RJ-45) module
66050	BlackDiamond 12800 XM-2X	BlackDiamond 12800 2-port 10G XENPAK Module
41112	BlackDiamond 8800/BlackDiamond 12800 Spare PSU/Fan Controller	BlackDiamond 8800/BlackDiamond 12800 Spare PSU/Fan Controller board
41121	BlackDiamond 8800/BlackDiamond 12800 Spare Blank Panel	BlackDiamond 8800/BlackDiamond 12800 Spare Blank Panel
41151	BlackDiamond 8800/BlackDiamond 12800 Cable Management Clip Kit	BlackDiamond 8800/BlackDiamond 12800 Cable Management Clip Kit
65043	BlackDiamond 8806/BlackDiamond 12804 Spare Fan Tray	BlackDiamond 8806/BlackDiamond 12804 Spare Fan Tray
65046	BlackDiamond 8806/BlackDiamond 12804 Mid Mount Kit	BlackDiamond 8806/BlackDiamond 12804 Mid Mount Kit
10110	SR XENPAK	10 Gigabit Ethernet XENPAK Transceiver, 850nm, up to 300m on multimode fiber, SC connector
10111	LR XENPAK	10 Gigabit Ethernet XENPAK Transceiver, 1310nm, up to 10km on single-mode fiber, SC connector
10112	ER XENPAK	10 Gigabit Ethernet XENPAK Transceiver, 1550nm, up to 40km on single-mode fiber, SC connector
10113	ZR XENPAK	10 Gigabit Ethernet XENPAK Transceiver, 1550nm, up to 80km on single-mode fiber, SC connector
10114	LX4 XENPAK	10 Gigabit Ethernet WWDM XENPAK Transceiver, 1310nm, up to 300m on multi-mode fiber and up to 10km on single-mode fiber, SC connector
10051	SX SFP	SFP, 1000BASE-SX, LC connector
10052	LX SFP	SFP, 1000BASE-LX, LC connector
10053	ZX SFP	SFP, Extra long distance SMF 70 Km/21 dB budget, LC connector
